

# STORAGE ASHORE INFORMATION

---

## STORAGE ASHORE

Please book a date to be launched or hauled out at the harbour reception, or online, along with any other services you may require. Cradles must be used when ashore if you have a sailing vessel which has the mast up and doesn't have bilge keels; these can be supplied by Mylor Yacht Harbour and are then charged on a monthly basis. Although we are fortunate enough to be well protected, it is still a good idea to double check that all covers, tarpaulins and sails are well tied down to prevent damage to yours and other boats. We do have trees lining either side of our shore storage area so please check your drains and other areas for the build-up of leaves, regularly.

## CAR PASS AND ACCESS

Car passes must be displayed at all times when on site. This pass is valid for one vehicle and is boat specific not car specific so can be moved between cars. A second pass can be purchased in the office at a discounted rate. The current code for the shower block is 3590.

## ELECTRICITY AND WATER

An electricity supply and water tap is available next to your lay-up berth. You may connect your boat yourself but please inform the office so that a meter reading can be taken. Electricity is metered and we charge per unit. A connection charge of £35 including VAT is made if you request MYH to connect your vessel for you.

## LADDERS

For safety reasons we cannot lend or supply ladders for you to access your boat while it is ashore so please bring your own. We would recommend locking your ladder to your boat or cradle.

## MARINE TEAM

Our Marine Team offer all boatyard services on site; from a hull polish to a full refit and everything in between. We have highly skilled engineers, electricians, painters, shipwrights and GRP specialists who are ready to take on any job. Just let us know if you would like a tour of our facilities or need information and prices on some work you have in mind.

## CONTRACTORS

All contractors must be registered with and approved by us to work on our site, whether afloat or ashore. To do this they must have public liability insurance and the necessary qualifications if applicable. We display a list of approved contractors in the harbour reception or if you have another contractor in mind they can apply to us for approval. Contractors must sign in and out of the site every time they visit and will be charged a small fee each day to cover our administration and management.

## YARD SAFETY

We would like to draw your attention to the following points that must be adhered to by all our customers to reduce risks, while boats are stored ashore this winter:

- Gas bottles must be removed from boats over the winter period.
- Furling headsails left on over winter will need to be wrapped securely and tied off.
- Chocks, shores and cradle legs should not be adjusted without MYH approval.
- Please keep your speed below 20mph in the yard.
- To comply with environmental obligations any antifoul scrapings should be contained and bagged. These must not go into general waste bins- please contact the office and we can arrange disposal.
- Free waste oil and battery disposal facilities are provided in the lower car park, please use them.
